Subject: Requesting availability for next Dive Operation

Gary Miller has decided to move forward with the next stage of investigation at the San Jacinto Waste Pits in Houston. We will be placing sampling devices in shallow water. A few of the locations will require diving, but most of the locations will require on-foot placement of the samplers.

Gary would like for us to consider dates near April 4th.
Please let me know your availability for the following three weeks. I anticipate the trip will be for 3-4 days (including travel).

- | | |
|---------------------|---------------|
| 1) March 28-April 1 | AVAILABLE |
| 2) April 4-8 | AVAILABLE |
| 3) April 11-15 | NOT AVAILABLE |

Gary is also considering asking the RP or the dive team to perform a more complete physical inspection of the cap. A time from for this potential operation has not been discussed. I will keep everyone posted as it develops.
